How to run CMS on Mac OS X 10.8 or above

1. Check Mac OS X Version.

a. Click on 'Apple Button'

b. Click on 'About This Mac'

c. Follow the next step if this version is later than 10.8

2. Go to System Preferences

a. Click on 'Apple Button'

b. Click on 'System Preferences...'

c. Click on Security & Privacy
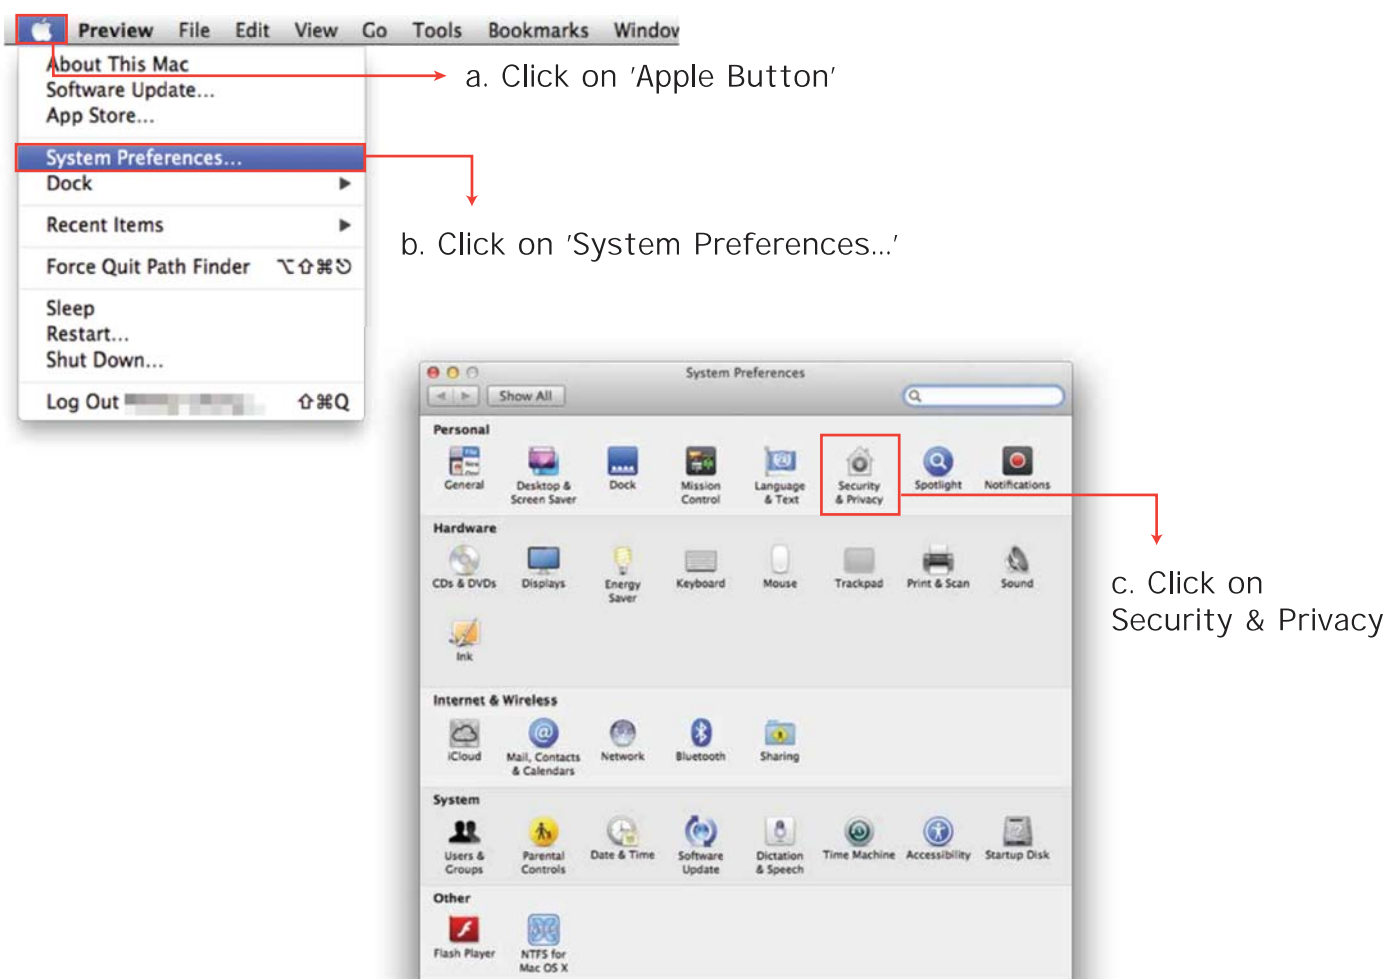

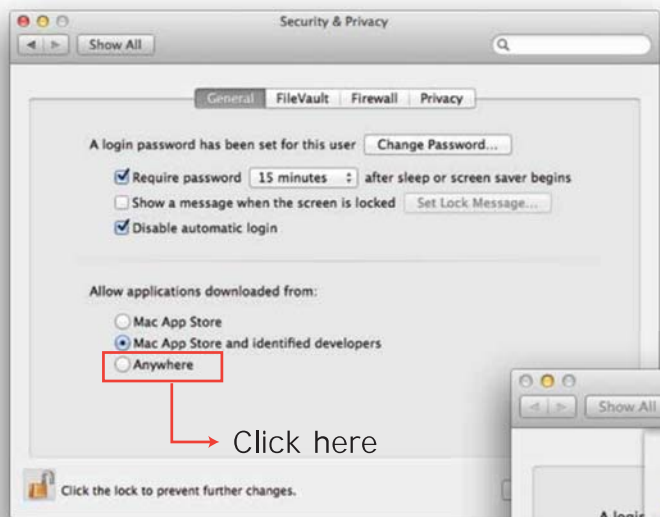

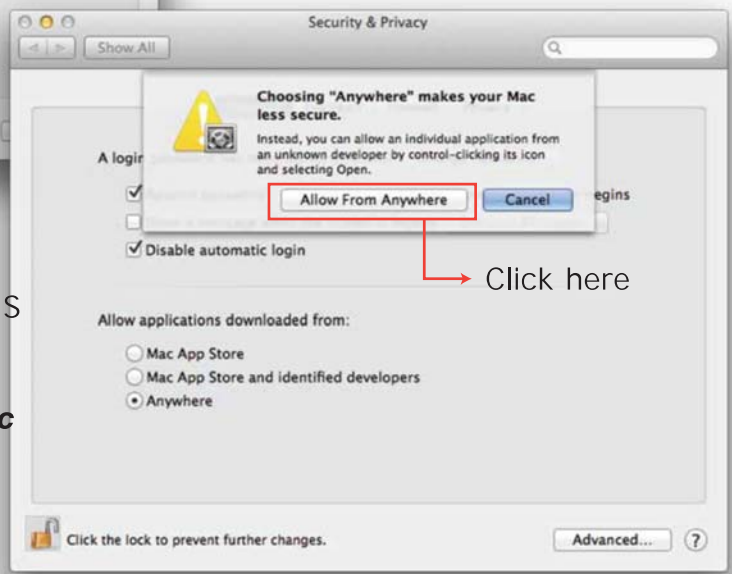

3. Change application authority setting

a. Click on the padlock to authenticate

b. A window will pop up
   to ask user's password

c. Once system access is
   authorized, you will be able to
   change setting to **'Anywhere'**

Click here

Click here

d. After you are done, run the CMS
   software. Once you have
   launched the CMS, you can
   change the setting back to **'Mac
   App Store and identified
   developers'** in order to keep
   safe the operating system.
